

Jenkinsfile

Video 4.2

What you will learn in this video

Theory:

- What is a Jenkinsfile
- Declarative and scripted pipelines

Practice:

- Create and run simple pipeline jobs

- A **script** containing the **definition** and the **steps to execute** in a Jenkins pipeline

- A **script** containing the **definition** and the **steps to execute** in a Jenkins pipeline
- Typically **stored under version control at the root level** of the repository

- A **script** containing the **definition** and the **steps to execute** in a Jenkins pipeline
- Typically **stored under version control at the root level** of the repository
- Written using a **DSL based on Groovy**

- A **script** containing the **definition** and the **steps to execute** in a Jenkins pipeline
- Typically **stored under version control at the root level** of the repository
- Written using a **DSL based on Groovy**
- Can use **declarative or scripted syntax**

Scripted vs Declarative Pipelines

Scripted vs Declarative Pipelines

Scripted Pipeline

- Imperative programming model

Scripted vs Declarative Pipelines

Scripted Pipeline

- Imperative programming model
- Suited for complex requirements

Scripted vs Declarative Pipelines

Scripted Pipeline

- Imperative programming model
- Suited for complex requirements
- Flexible and extensible

Scripted vs Declarative Pipelines

Scripted Pipeline

- Imperative programming model
- Suited for complex requirements
- Flexible and extensible
- Can do anything that Groovy can script

Scripted vs Declarative Pipelines

Scripted Pipeline

- Imperative programming model
- Suited for complex requirements
- Flexible and extensible
- Can do anything that Groovy can script
- Could become messy if unfamiliar with Groovy

Scripted vs Declarative Pipelines

Scripted Pipeline

- Imperative programming model
- Suited for complex requirements
- Flexible and extensible
- Can do anything that Groovy can script
- Could become messy if unfamiliar with Groovy

Declarative Pipeline

- Declarative programming model

Scripted vs Declarative Pipelines

Scripted Pipeline

- Imperative programming model
- Suited for complex requirements
- Flexible and extensible
- Can do anything that Groovy can script
- Could become messy if unfamiliar with Groovy

Declarative Pipeline

- Declarative programming model
- Suited for regular requirements

Scripted vs Declarative Pipelines

Scripted Pipeline

- Imperative programming model
- Suited for complex requirements
- Flexible and extensible
- Can do anything that Groovy can script
- Could become messy if unfamiliar with Groovy

Declarative Pipeline

- Declarative programming model
- Suited for regular requirements
- Very readable, opinionated syntax, stricter and pre-defined structure

Scripted vs Declarative Pipelines

Scripted Pipeline

- Imperative programming model
- Suited for complex requirements
- Flexible and extensible
- Can do anything that Groovy can script
- Could become messy if unfamiliar with Groovy

Declarative Pipeline

- Declarative programming model
- Suited for regular requirements
- Very readable, opinionated syntax, stricter and pre-defined structure
- Can integrate scripted syntax

Scripted vs Declarative Pipelines

Scripted Pipeline

- Imperative programming model
- Suited for complex requirements
- Flexible and extensible
- Can do anything that Groovy can script
- Could become messy if unfamiliar with Groovy

Declarative Pipeline

- Declarative programming model
- Suited for regular requirements
- Very readable, opinionated syntax, stricter and pre-defined structure
- Can integrate scripted syntax
- Learning curve if unfamiliar with declarative programming
