# **Testing Workflow**

Video 3.3

# What you will learn in this video

#### Theory:

- Why testing is important
- Different types of tests

#### Practice:

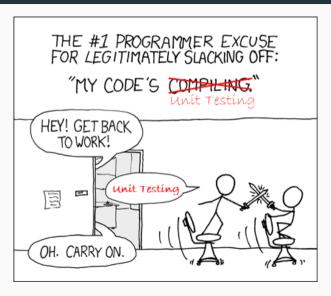

Implement the testing part of a CI workflow

Testing forces developers to write smaller units of code

- Testing forces developers to write smaller units of code
- Testing act as self-documentation

- Testing forces developers to write smaller units of code
- Testing act as self-documentation
- Testing reduces the risk of regression bugs in software releases

- Testing forces developers to write smaller units of code
- Testing act as self-documentation
- Testing reduces the risk of regression bugs in software releases
- Unit testing alone contributes to removing 30% of bugs [McConnell, Software Estimation: Demystifying the Black Art]

• Unit tests: test a single unit of code (e.g. a method of a class or a function)

- Unit tests: test a single unit of code (e.g. a method of a class or a function)
- Integration tests: test the correct interaction between systems (e.g. application and database can communicate)

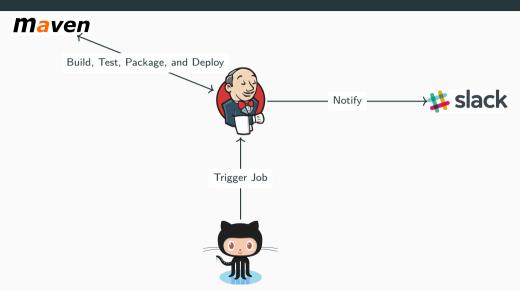

- Unit tests: test a single unit of code (e.g. a method of a class or a function)
- Integration tests: test the correct interaction between systems (e.g. application and database can communicate)
- Acceptance tests: test that a feature or use case is correctly implemented (also known as end-to-end tests)

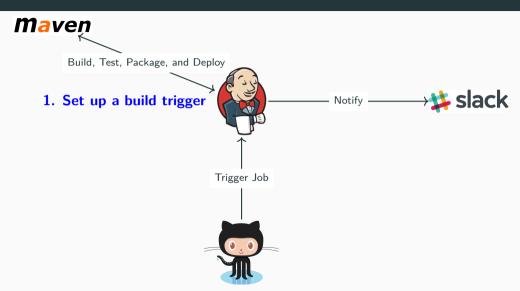

- Unit tests: test a single unit of code (e.g. a method of a class or a function)
- Integration tests: test the correct interaction between systems (e.g. application and database can communicate)
- Acceptance tests: test that a feature or use case is correctly implemented (also known as end-to-end tests)
- Regression tests: test that a bug is fixed and won't happen again

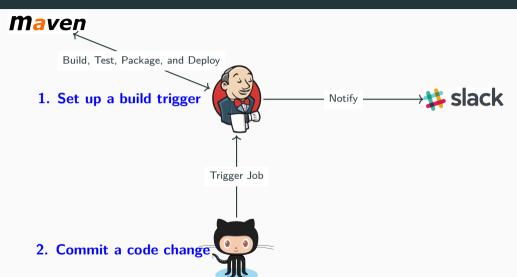

- Unit tests: test a single unit of code (e.g. a method of a class or a function)
- Integration tests: test the correct interaction between systems (e.g. application and database can communicate)
- Acceptance tests: test that a feature or use case is correctly implemented (also known as end-to-end tests)
- Regression tests: test that a bug is fixed and won't happen again
- Smoke tests: tests executed before running longer test suites

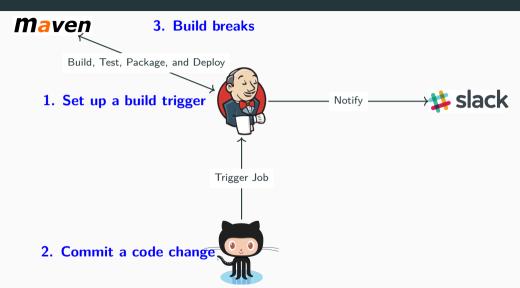

- Unit tests: test a single unit of code (e.g. a method of a class or a function)
- Integration tests: test the correct interaction between systems (e.g. application and database can communicate)
- Acceptance tests: test that a feature or use case is correctly implemented (also known as end-to-end tests)
- Regression tests: test that a bug is fixed and won't happen again
- Smoke tests: tests executed before running longer test suites
- Load tests: test the system under load (e.g. heavy traffic) similar to stress and performance tests

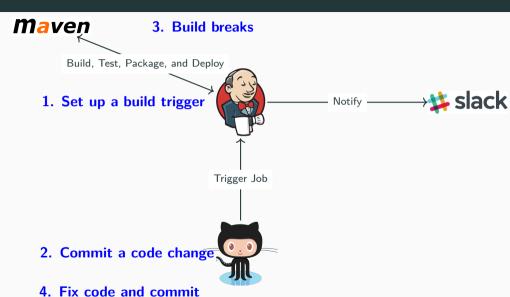

- Unit tests: test a single unit of code (e.g. a method of a class or a function)
- Integration tests: test the correct interaction between systems (e.g. application and database can communicate)
- Acceptance tests: test that a feature or use case is correctly implemented (also known as end-to-end tests)
- Regression tests: test that a bug is fixed and won't happen again
- Smoke tests: tests executed before running longer test suites
- Load tests: test the system under load (e.g. heavy traffic) similar to stress and performance tests
- Security tests: test security issues (e.g. security updates applied)

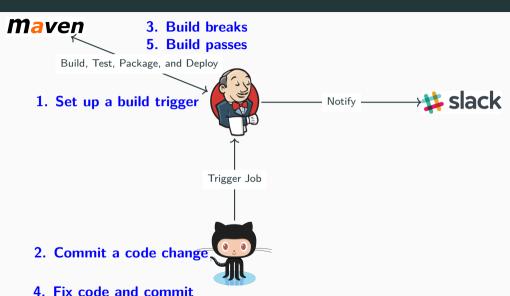

• In the demo we are going to use a **poll build trigger** (i.e. Jenkins polls GitHub continuously for changes)

- In the demo we are going to use a poll build trigger (i.e. Jenkins polls GitHub continuously for changes)
- A push build trigger is more efficient (i.e. GitHub pushes a notification to Jenkins when there is a code change)

- In the demo we are going to use a poll build trigger (i.e. Jenkins polls GitHub continuously for changes)
- A push build trigger is more efficient (i.e. GitHub pushes a notification to Jenkins when there is a code change)
- Push build triggers are implemented via webhooks but Jenkins can't be deployed on localhost: https://medium.com/@marc\_best/trigger-a-jenkins-build-from-agithub-push-b922468ef1ae
